+ 40 MORE GAME-CHANGING CONCEPTS

AI PRODUCT FUNDAMENTALS

The foundation every AI PM must master

1. **AI Product Management**
   Managing AI products end-to-end.
2. **AI vs Traditional PM**
   Key differences in mindset & approach.
3. **AI Product Lifecycle**
   From ideation to scale & iteration.
4. **AI Product Strategy**
   Align AI initiatives with business goals.
5. **AI Product Vision**
   Define the future impact you want to create.
6. **AI Product Roadmap**
   Plan features, models & milestones.
7. **AI Use-Case Discovery**
   Identify high-impact AI opportunities.
8. **AI Product-Market Fit**
   Validate value for users & business.

AI & ML CONCEPTS

Core AI/ML knowledge every PM needs

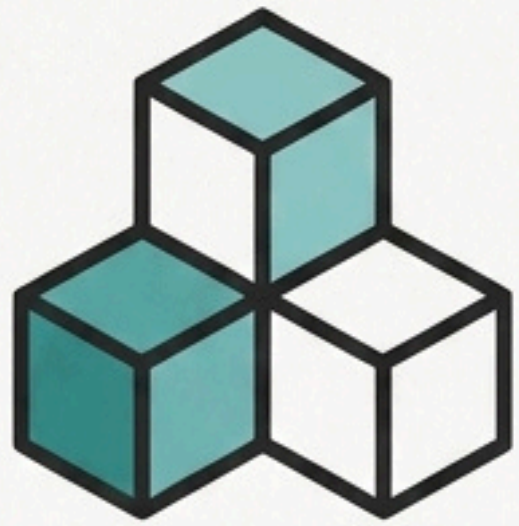

9 **Machine Learning Basics**
Learn how machine learn from data.

10 **Supervised vs Unsupervised Learning**
Two main approaches to training models.

11 **Deep Learning**
Neural networks for complex patterns.

12 **Generative AI**
AI that creates new content.

13 **LLMs**
Large Language Models power text generation.

14 **NLP**
Understand & generate human languages.

15 **Computer Vision**
Machines that see & interpret images.

16 **Embeddings**
Convert data into meaningful vectors.

17 **Vector Databases**
Store & search high-dimensional data.

18 **Fine-Tuning**
Adapt models to specific needs.

19 **RAG – Retrieval-Augmented Generation**
Combine search with generation.

20 **AI Agents**
Autonomous systems that take action.

AI PRODUCT ARCHITECTURE

Building blocks behind AI products

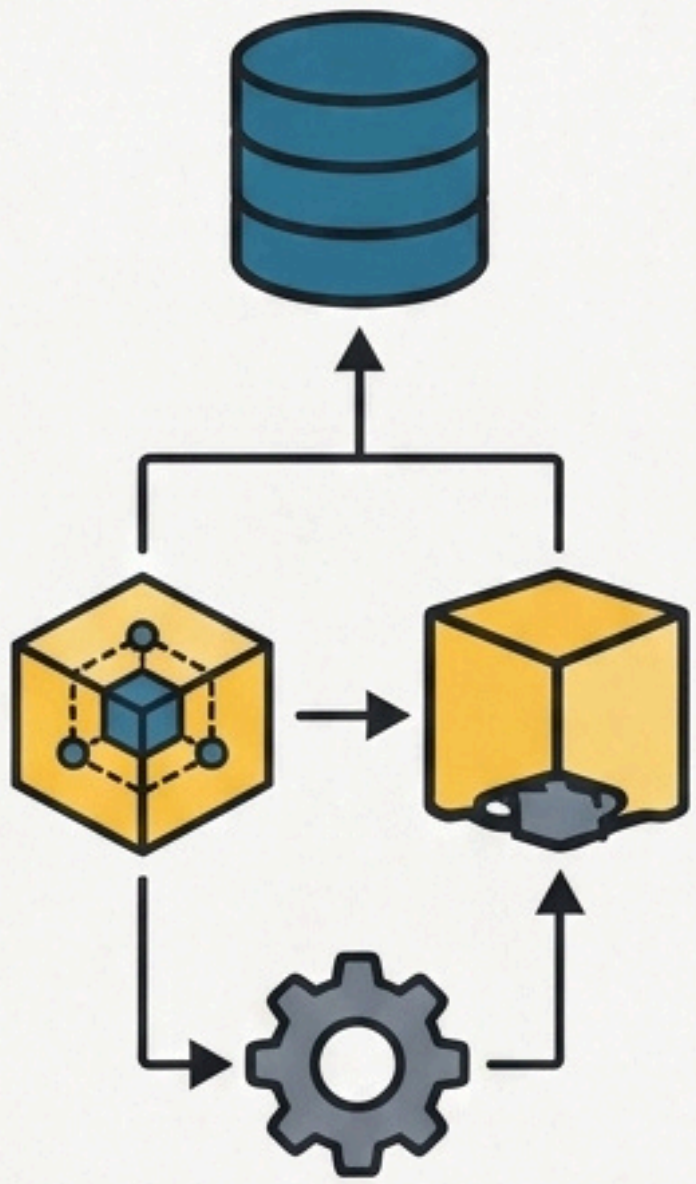

21 AI/ML Pipelines
Data → Model → Deployment flow.

22 Model Selection
Pick the right model for the right problem.

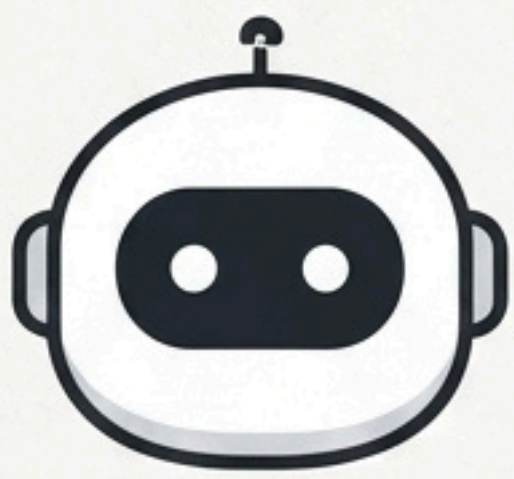

23 Prompt Engineering
Design prompts that get better outputs.

24 Context Windows
The memory size of AI models.

25 Tokens
The building blocks of LLM inputs/outputs.

26 APIs & Model Integration
Connect models into your product.

27 AI Workflows
Orchestrate multi-step AI tasks.

28 Human-in-the-Loop
Keep humans in control where it matters.

29 AI Agent Architecture
Design intelligent, goal-driven agents.

AI PRODUCT EVALUATION

Measure what matters in AI

30 **Model Evaluation**
Test model performance systematically.

31 **Accuracy vs Reliability**
Balance correctness with consistency.

32 **Hallucinations**
Identify & reduce false outputs.

33 **AI Quality Metrics**
Use the right metrics for AI products.

34 **Offline vs Online Evaluation**
Test in labs and in real-world.

35 **A/B Testing AI Products**
Compare versions to improve outcomes.

36 **Latency & Cost**
Optimize for speed and efficiency.

37 **Model Monitoring**
Track performance in produztion.

RESPONSIBLE AI

Build AI products people can trust

38 AI Safety
Prevent harm & unintended consequences.

39 AI Bias & Fairness
Ensure fairness across all users.

40 Privacy & Data Protection
Protect user data & ensure compliance.

41 Explainability
Make AI decisions understandable.

42 AI Governance
Set policies & ensure accountability.

43 Security & Prompt Injection
Protect against malicious attacks.

44 Responsible AI Product Design
Design with ethics from the start.

AI PM
EXECUTION (1/2)

From plan to product

45 AI PRDs

Write PRDs tailored for AI products.

46 User Stories for AI

Defino user needs for AI features.

47 AI MVPs

Build fast, learn faster.

48 Experimentation

Run experiments to validate ideas.

49 Stakeholder Management

Align teams & manage expectations.

50 Build vs Buy

Decide whether to build or leverage.

AI PM
EXECUTION (2/2)

Go-to-market & beyond

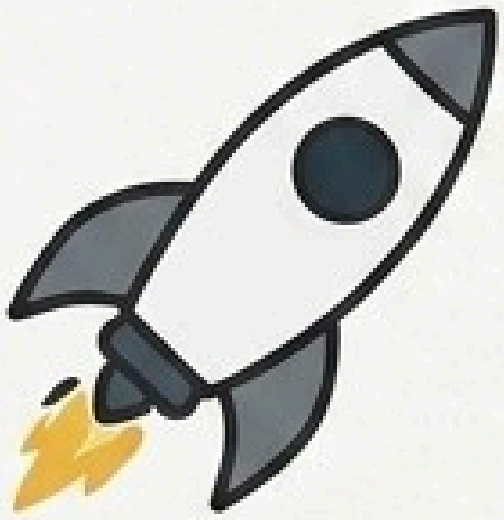

S1 AI Vendor Selection

Choose the right partners & tools.

S2 AI Product Launch

Launch AI products with confidence.

S3 AI Product Analytics

Track usage, engagement & impact.

54 Continuous AI Improvement

Iterate models, data & experience.
